# Electric Utility Fundamentals + Insights (virtual)

July 21 – 22, 2021

Course Overview

This online program provides utility and service employees with a deep understanding of how the electric utility industry works. Participants will gain a better awareness of their roles within the organizations. Participants will also gain a broader understanding of the electric industry's critical issues and the interaction between utilities and the stakeholders. This course traverses the business of electricity, from the scientific beginnings to today's generation choices, the modern electric grid, customer engagement, and how utilities make money. The program also covers an overview of federal, state/provincial, and municipal regulations and their impacts on the business model.

Who Should Attend?

This program is designed for personnel who wants to broaden their understanding of the operation and business aspects of the electric industry. Participants will benefit from the program regardless of their level of experience or field of work
